Debugging and Error Handling in ASP.NET Core Web API

Introduction

Nertil Poci
Software Architect

Version Check

This course was created by using:
- .net 8

Version Check

This course is 100% applicable to:
- from .net 6 up to .net 8

Overview

**Prerequisites and tooling**

Setting up the API and Dependencies

Exploring the API endpoints and logic

Course Prerequisites

Basic experience in building

an ASP.NET Core Web API

Basic C# knowledge

Setting Up the Project

Demo

Setting up the project
- Configure database
  - Local DB
  - In Memory

Exploring the API Project

Demo

Exploring our API project

- Structure

- Logic

- Endpoints

Summary

Configured dependencies
- Local DB
- In Memory

Explored the project structure
